

# DEVSWEEK INTRODUCTION

# WE BUILD SOFTWARE SOLUTIONS OF ANY COMPLEXITY.

**DevsWeek** was founded with the simple idea of helping other businesses to reach their digital transformation.

We embraced open-source software and love utilizing the latest technologies. Our full-service development consists of all the resources required to plan, build, and maintain high-performance technology, **from UX/UI design to frontend and backend development, and on through to infrastructure management.**

To increase productivity and provide project cost reduction to our customers, we are continually investing in training new technologies. Our focus is always on targeting cloud-native architecture, security, test automation and DevOps practice to increase the speed of each part of the process.

OUR  
SOLUTIONS.

## **CUSTOM DEVELOPMENT SOFTWARE**

DevsWeek combines agile/test-driven engineering practices with the proper alignment of quality attributes to reduce development time, lower project development costs and ensure product alignment with business goals. Whether your company requires a turnkey outsourced solution or augmentation of your in-house development team, we can help.

### **key services and solutions**

- Research & Discovery
- Requirement Analysis and Technical Analysis
- Rapid Prototyping
- System Architecture and Solution Design
- Software Development and Testing
- Deployment Implementation

## **QA AND TESTING**

We leverage the latest tech, practices, and standards to help you create high-quality software within the required timeframe.

If you need to improve the development speed, it is very important to have a testing team that can deliver the best and most accurate report of the current quality state of your product. Our dedicated team can expand your testing capacity to help you to determine whether your product quality aligns with your expectation.

### **key services and solutions**

- QA Outsourcing
- QA Consulting
- Quality Assessment
- Pre-certification Testing

## PRODUCT STRATEGY & ROADMAPPING

Over the last several years in the software development industry, in addition to actual product building, we have also been transferring our own ideas into product strategy, UX, and design. Our priorities are to understand a client's business and help achieve their goals..

### key services and solutions

- Product Strategy
- Roadmap Creation
- Requirements Specifications
- Technology Assessment
- UX & UI

## BUSINESS PROCESS AUTOMATION

We have extensive experience building enterprise applications, and we can help your company to navigate the sea of tools on the market to automate the different parts of an organization, and help you to evaluate the best options based on your organization's needs.

### key services and solutions

- Technology Evaluation
- Automation Project Management
- Automation Project Execution

START YOUR WAY TO  
DIGITAL SUCCESS

## INTEGRATIONS

DevsWeeks systems integration specialists can help companies manage the complexity inherent to technology and solve business challenges through the integration of technology—as discrete services or comprehensive solutions. We offer both advisory and implementation services to help companies better manage their technology organizations and portfolio of technology assets.

### key services and solutions

- Integration Project Management
- Enterprise Integration
- Development of custom integrations

## DEVOPS

Our team can bring different strategies to your organization that help to improve your product's development speed, QA process and time to market. In each organization, DevOps automates processes to increase efficiency and ramps up testing to quickly identify and correct problematic issues through constant iteration. A well-implemented DevOps pipeline can transform the way your organization gets work done, yielding far-reaching benefits for your business.

### key services and solutions

- Development Environments
- Production Environments
- Continuous Integration
- Continuous Delivery and Deployment
- Performance Optimization & Stress Testing

### Prepackages

We can offer different packages of DevOps as services based in your needs. Or you have a project on going or your company wants to outsource all the effort to maintain your infrastructure and process.
